Quiz 4/ Version 1

1.

Create two interfaces called File and Bank.

The File interface must contain a method called save that takes a String fileName as a parameter.

The Bank interface must contain a method called save that takes a String accNumber as a parameter.

Each interface must also contain one additional method of your choice.

2.

Create a class called OnlineBankAccount that implements both interfaces.

In the OnlineBankAccount class, override the save method to implement the Bank version of the method.

3.

True or False:

A single class can implement multiple interfaces in Java.
